

Dune Dashboard Feedback

This is an **evaluation** of a cartographic monitoring dashboard prototype for Namib Desert star dune dynamics (for MSc Cartography thesis). Your feedback is important for evaluating the dashboard prototype.

Responses are **fully anonymous**, so no name or contact information is collected. Takes ~5 - 10 minutes.

About you

(optional — helps contextualise responses)

1. Background

Which of these fields are you specialized in?
(check all that apply)

Tick all that apply.

- ☐ Prefer not to say
- ☐ Geodesy
- ☐ Photogrammetry
- ☐ Remote Sensing
- ☐ Geoinformatics
- ☐ Geomorphology
- ☐ Geology
- ☐ Cartography
- ☐ Other academic

2. 1. Temporal Encoding

Time is encoded in sequential colors across crest lines and playa extents.

Mark only one oval per row.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly agree
The color progression clearly communicates the sequence of observations over time.	☐	☐	☐	☐	☐
I could distinguish earlier from more recent observations without consulting the legend.	☐	☐	☐	☐	☐

3. 2. Multi-layer Legibility & Visual Hierarchy

The map overlays crest lines, playa extents, margin of error, and optionally crest movement arrows simultaneously.

Mark only one oval per row.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly agree
I can distinguish between the different map layers without confusion.	☐	☐	☐	☐	☐
The visual hierarchy (what stands out first) matches what I'd expect to be most important.	☐	☐	☐	☐	☐
The legend is sufficient to interpret all map symbols.	☐	☐	☐	☐	☐

4. 3. Interaction Design

Four preset modes with different temporal filters

Mark only one oval per row.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly agree
The four preset modes were intuitive to use.	☐	☐	☐	☐	☐
The Compare preset effectively supported understanding of dune change between two selected dates.	☐	☐	☐	☐	☐

5. **4. Error Visualization**

Error is shown as a margin-of-error buffer, plus displacement error (March 2026 only)

Mark only one oval per row.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly agree
Showing margin of error directly on the map as a buffer (not just as a number in text) added value.	☐	☐	☐	☐	☐
The three-tier color coding for distance between satellite image-derived crest and GNSS points was intuitive.	☐	☐	☐	☐	☐

6. **5. Supplementary Graphics**

Wind roses and Gantt chart

Mark only one oval per row.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly agree
The wind roses enhanced my understanding of the environmental context.	☐	☐	☐	☐	☐
The wind coverage Gantt chart was useful for understanding data gaps.	☐	☐	☐	☐	☐

7. 6. Aesthetics & Domain Suitability

Mark only one oval per row.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly agree
The color palette felt appropriate for the Star Dune Dynamics project's cartographic visualization tool.	☐	☐	☐	☐	☐
The visual design supports interpreting the scientific data without distraction.	☐	☐	☐	☐	☐

8. 7. Overall Assessment

Mark only one oval per row.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly agree
The dashboard effectively communicates how the aeolian landscape changed over 2017–2026.	☐	☐	☐	☐	☐
Compared to static maps, this dashboard represents a meaningful advancement in data visualization.	☐	☐	☐	☐	☐

8. Other Suggestions

Your input will directly shape future development.

9. Which of the following would most improve the dashboard? *(select maximum 3 that apply)*

Tick all that apply.

- ☐ Clearer temporal colormap / legend
- ☐ Better layer toggling / layer order control
- ☐ More intuitive preset modes
- ☐ Stronger uncertainty communication
- ☐ Improved wind data integration
- ☐ Mobile / smaller screen support
- ☐ Faster load times
- ☐ Additional export formats
- ☐ More context / explanatory text on the map
- ☐ A time-slider / animation feature
- ☐ Other: _____

10. What would you change or add next?

e.g. add location for all wind weather stations...

11. What is working well and should be kept?

e.g. the Compare preset made change detection very intuitive...
